SUMMARY

Full stack developer with a strong JavaScript, TypeScript, Node.js, and Python foundation, hands-on AI automation experience, and a bias toward reducing future work rather than clearing today's queue. Builds internal tools, deploys LLM-powered pipelines, ships bug fixes, and communicates clearly in writing. Comfortable reading unfamiliar codebases, working async-first in remote teams, and delivering usable beta builds fast. Uses Claude Code and Cursor daily as core build tools.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Node.js, Python, PHP, Dart
Frontend	React, Next.js, HTML5, CSS3, responsive design, async UI state handling
Mobile	Flutter (4 to 5 production apps), Firebase integration, cross-platform iOS and Android
Databases and APIs	Supabase, PostgreSQL, MongoDB, REST APIs, webhooks, GraphQL (familiar)
AI and Automation	n8n workflow automation, AI agent development, LLM pipeline design, prompt engineering, triage and classification automation, Claude API, GPT API, Gemini API
Tooling and Infra	Claude Code, Cursor, Git, GitHub, Vercel, Linux, cross-platform deployment
Practices	Async-first remote collaboration, structured documentation, written-first communication, independent debugging

EXPERIENCE

Independent Full Stack Developer and AI Automation Consultant

2023 – Present

Self-Employed, Remote

- Delivered 500+ client projects spanning full stack web builds, AI automation, and internal tooling — consistently identifying the repeating problem worth fixing rather than handling each instance individually.
- Deployed LLM-powered automation pipelines using n8n, integrating Claude, GPT, and Gemini APIs with webhook triggers, triage logic, classification, and validation checkpoints so only correct output reached end users.
- Built and connected production applications to Supabase and PostgreSQL databases, designing schemas, writing queries, and managing migrations across multiple live client projects.
- Integrated webhooks across client applications to trigger automated workflows, sync data between services, and handle real-time events from third-party APIs reliably in production environments.
- Built internal tools from scratch when buying was not the right answer, including API integrations and scripts that removed manual work from recurring processes.
- Deployed and troubleshooted production applications on Vercel across multiple client builds, managing environment variables, edge configs, and deployment pipelines independently.
- Built and shipped 4 to 5 Flutter mobile apps — cross-platform iOS and Android with Firebase integration, real-time features, and user authentication — delivered to production.

Frontend Engineer

2026

Fomi Art, Remote

- Built React and Next.js interfaces for an AI generation product, handling async job states (queued, generating, complete) so the UI stayed clear and responsive during backend processing.
- Worked async-first with a fully distributed remote team using written communication and structured handoffs rather than synchronous meetings.

Software Development Intern

Jul – Sep 2025

WebSpark Studios, Islamabad

- Owned a cross-platform desktop application end to end in Electron.js and TypeScript, including a searchable history system and real-time audio transcription, iterating on user feedback and shipping improvements independently.

AI and Computer Vision Research Intern

Sep 2025 – Feb 2026

SEECs Research Lab, NUST, Islamabad

- Managed a full ML pipeline from dataset preparation to on-device deployment, writing clear technical documentation at each stage so the work was reproducible and reviewable by others.

KEY PROJECTS

CloudSync AI — B2B SaaS for Sales Automation

2025

Full stack SaaS · Supabase · Node.js · AI automation · Webhooks · React

- Built and maintained a B2B SaaS platform centralising CRM, email, and sales workflows into one AI-powered system, automating lead follow-ups and deal tracking for a US sales team client. Owned the full product from architecture through deployment and ongoing maintenance.

AI Workflow Automation Pipeline

2024

n8n · Claude API · GPT · Webhook triggers · Multi-platform delivery

- Built an end-to-end AI agent system with webhook-triggered intake, triage logic, classification, content generation, validation checkpoints, and scheduled multi-platform delivery. Reduced manual workflow time by over 80 percent.

PAYTKN — Decentralised Subscription and Billing Platform

2025

Full stack · Blockchain · Webhooks · Multi-currency · Automated billing

- Full stack subscription payment platform with webhook-driven automated billing logic, native token integration, and multi-currency settlement. Shortlisted for NSTP Hatch 8.

EDUCATION

Bachelor of Electrical Engineering

Nov 2022 – May 2026

National University of Sciences and Technology (NUST), Islamabad

- Machine Learning — Andrew Ng, Coursera / Stanford | Blockchain Development — freeCodeCamp | Cryptography and Blockchain — SEECs NUST
